Explanations	

In line with our company's strategies for product diversification, value-added production, and sustainable growth, the legal permitting and certification processes for our Ethyl Alcohol Production Facility investment have been completed, and production activities have commenced at the facility.

In this context, the Ministry of Agriculture and Forestry of the Republic of Turkey has approved the operation of our facility, and a Production and Operations Compliance Certificate, bearing document number 22099, has been issued in the name of our company. The aforementioned certificate was received by our company on November 24, 2026.

In addition, the necessary Distribution Compliance Certificate for the market release of the produced ethanol has been obtained, and with the completion of the legal licensing processes, commercial sales of our ethanol products commenced as of November 24, 2026.

As a result of the capacity increase achieved through project modification works, our facility's annual ethanol production capacity has been raised from 5,524,050 liters to 19,972,050 liters, thereby increasing our annual production capacity by approximately 3.6 times.

Considering the demand from the industrial, medical, and cosmetic sectors in the Turkish ethyl alcohol market, along with the supply structure reliant on imports, this investment is expected to contribute to increasing domestic production capacity, reducing import dependency, and strengthening supply security.

The foundation of this investment lies in the use of molasses—a byproduct of our Company's sugar production activities—as a raw material in ethanol production. This approach aims to transform byproducts from sugar production into value-added products, utilize existing resources more efficiently, and strengthen our Company's integrated production structure.

Our facility is designed in line with the principles of the circular economy and sustainable production. It is planned to utilize the byproduct "şlempe," generated during ethanol production, as a raw material in the production of organomineral and liquid organic fertilizers; this initiative aims to increase resource efficiency and support sustainability in production processes.

Furthermore, it is anticipated that the more efficient use of energy resources and a contribution to environmental sustainability goals will be achieved by utilizing renewable electricity generated from our Company's existing solar power plants (SPP) in production processes.

With the commencement of ethanol production activities and the launch of commercial sales processes, the Company aims to diversify its product portfolio, increase the economic value of byproducts derived from sugar production, and create new revenue streams.

It is expected that this investment will positively contribute to our Company's sales revenue, profitability, and financial performance, not only through domestic sales but also through potential export opportunities that may arise in the future.

Our Company continues its operations in line with its goals of expanding its existing production infrastructure with value-added products, utilizing its resources efficiently, and achieving sustainable growth.

This information is respectfully submitted to the public and our investors.

We proclaim that our above disclosure is in conformity with the principles set down in “Material Events Communiqué” of Capital Markets Board, and it fully reflects all information coming to our knowledge on the subject matter thereof, and it is in conformity with our books, records and documents, and all reasonable efforts have been shown by our Company in order to obtain all information fully and accurately about the subject matter thereof, and we’re personally liable for the disclosures.
