Announcement Content	
Explanations	

The current status of our investments which are under construction in our Adana premises is as follows:

PTA Production Plant

All auxiliary facilities (steam boilers, demin water, cooling tower, nitrogen and hydrogen facility and compressed air facility) required for PTA production have been put into operation and the PTA Production Plant has been made available for feeding.

The first phase of the commissioning of the PTA Production Plant will be realized by putting operation Türkiye's largest process air compressor under the supervision of the contractor company. Work is ongoing to make the process air compressor and electricity production facility operational by the end of October 2024.

In order to ensure that the plant is put into operation safely and completely, compliance checks and tests carried out by the licensor company teams at the project site continue without any problems. The licensor company teams and SASA investment and operation teams continue their work in cooperation to carry out the commissioning activities of the entire plant within the framework of the previously planned work schedule.

Textile Chips, Bottle Chips, Pet Chips Production Plant

The intensive assembly work ongoing in our Adana premises is nearing the end and the commissioning process of our new Textile Chips, Bottle Chips, Pet Chips Production Facility with an annual capacity of 330,000 tons and MTR technology has been started.

The work to start production in accordance with the previously planned work schedule of the facility continues smoothly

Fiber Production Plant

The auxiliary facilities such as compressed air, tower water, chiller water of our new Fiber Production Plant with an annual capacity of 350,000 tons will be commissioned this month and the trial production of polyester fiber drawing lines is aimed to start in November in accordance with the planned work schedule. During this process, all controls continue to be performed for safe and high-quality commissioning.

The Low-Melt Polyester Production Plant with an annual capacity of 52,500 tons will constitute an important section of our Fiber Production Plant and meet an important raw material need for nonwoven products used in the hygiene, furniture, textile and health sectors. Thereby the demand which is still completely dependent on foreign sources will be met with domestic production. This facility, which will be Türkiye's first Low-Melt Fiber Production Unit, is also expected to start production within the previously planned schedule.

In the event of any discrepancy between the Turkish and English versions of this disclosure statement, the original Turkish version shall prevail. SASA disclaims all warranties and makes no representations about the accuracy or completeness of the English translation and assumes no liability for any errors, omissions or inaccuracies that may arise from use of this translation.
