Announcement Content	
Explanations	

Our company has initiated the production of recycled-content polyester polyol at its Düzce manufacturing facility by utilizing raw materials derived from the chemical recycling of post-consumer PET (polyethylene terephthalate) bottles. In this polyol solution, part of the traditional fossil-based raw materials is replaced with chemically recycled PET sources.

The related product is initially planned for use in rigid polyurethane foam systems employed in sandwich panel production. Technical trials have shown that this recycled-content solution can be integrated into production processes without any loss in performance.

We hereby inform the public of this information.

We proclaim that our above disclosure is in conformity with the principles set down in “Material Events Communiqué” of Capital Markets Board, and it fully reflects all information coming to our knowledge on the subject matter thereof, and it is in conformity with our books, records and documents, and all reasonable efforts have been shown by our Company in order to obtain all information fully and accurately about the subject matter thereof, and we’re personally liable for the disclosures.
