Sarkuysan recognized as the 29th in ISO's Top 500 Largest Industrial Enterprise in Türkiye rankings

Sarkuysan A.Ş., the leader of its industry in Türkiye, has reaffirmed its robust performance and the effectiveness of its sustainable growth strategy by moving up two ranks in the 2025 ISO 500 ranking. Over the course of its 54-year history, our company has consistently enhanced its production capacity, expanded its product range, and increased its international operations, thereby sustaining a robust position among the largest industrial enterprises in Türkiye.

The diversity of our production capabilities, which spans 90% of the product range in the industry, along with our comprehensive customer portfolio, strengthens our position in global markets. Sarkuysan, a significant global supplier of investments in renewable energy, automotive, electric vehicles, and AI-supported data centers, serves a wide range of industries, with a primary focus on the cable, transformer, engine, rail systems, and HVAC industries. In 2025, our Company accounts for 8% of the production in Europe and over 40% of the production in Türkiye in its key product category.

The journey of our Company towards globalization commenced in the 1980s and remains ongoing, with initial investments made in the USA followed by subsequent investments in Bulgaria. To begin with, our company Sarkwire has established itself as one of the leading 3-4 players in the US conductor market, owing to its advantage in geographical positioning to manufacture advanced products at two distinct locations, which allows us to satisfy the dynamic demand in the market generated by data centers and upgraded network infrastructure. The substantial self-reliance of our Company on raw materials required has further elevated our strategic value as a reliable supplier.

Our company Sark Bulgaria is boosting its sales, particularly attributed to its closeness to the heart of the European cable and electrification market and is expanding its investments and production capacity in line with this dynamic. On the other hand, our subsidiary Sarmakina, which fulfills the requirements of machinery and precision components of the cable,

transformer, and renewable energy industries, will also engage in our globalization efforts by investing in Bulgaria and conducting a segment of its production in Europe.

Our 14 MWp capacity SPP investment, a vital aspect of our sustainability strategy, is almost in the commissioning phase. Once this investment is finalized, approximately 25% of our energy consumption is expected to be derived from renewable resources. The clean energy to be generated will prevent 8,800 tons of CO₂ emissions, which is equivalent to the annual electricity consumption of around 7,300 households.

Furthermore, our "Gray Water" project, which is a groundbreaking effort in Türkiye in tackling drought due to global warming, has commenced operations, resulting in an approximately 80% decrease in our reliance on mains water for process water applications. This project mitigates the burden on the natural ecosystem and delivers a visionary and value-enhancing response to the environmental sustainability aspirations of stakeholders.

Our advancement in the ISO 500 ranking a tangible outcome of our operational competence, strategic investments, global growth approach, and sustainability-oriented vision. Sarkuysan is firmly committed to advancing its growth in accordance with its goal of fostering long-term value for all its stakeholders.
