Explanations	

As part of the Company's R&D and product development activities, an HR (High Resilience) Foam System has been developed for train seat applications used in the rail systems industry.

The developed system has successfully passed the heat release rate and smoke toxicity tests conducted in accordance with the EN 45545-2 standard, in line with the fire safety requirements applicable to rail system applications.

With this product, the Company has expanded its product portfolio for the rail systems industry, and commercial evaluation processes with existing and potential customers are currently ongoing. The product is expected to contribute to the Company's value-added product sales and the development of its activities in the rail systems industry in the medium and long term.

.

We proclaim that our above disclosure is in conformity with the principles set down in “Material Events Communiqué” of Capital Markets Board, and it fully reflects all information coming to our knowledge on the subject matter thereof, and it is in conformity with our books, records and documents, and all reasonable efforts have been shown by our Company in order to obtain all information fully and accurately about the subject matter thereof, and we’re personally liable for the disclosures.
