Explanations	

Our Company, Odine, together with its Turkish subsidiary, OdineLabs, has successfully completed the patent application process for the "Autonomous Knowledge Graph and LLM Tool Definition Generation Method and System" as part of its research and development activities in the fields of artificial intelligence and next-generation software technologies.

The invention relates to a method and system that autonomously establishes the structured connectivity infrastructure required for AI agents to communicate with enterprise software systems in a secure and up-to-date manner.

The developed technology analyzes enterprise software components such as microservices, application programming interfaces (APIs), and databases to automatically generate structured definitions that enable AI agents to interact with these systems, while ensuring that such definitions remain up to date in line with changes occurring within the systems.

Through this technology, it is aimed to automate the integration processes between AI agents and enterprise software systems, reduce the need for manual documentation and integration efforts, and establish more reliable, up-to-date, and efficient interaction infrastructures.

This patent application, which is an outcome of the research and development activities carried out by our Company and its subsidiary, OdineLabs, in the fields of artificial intelligence and software technologies, is considered within the scope of our Company's efforts to further strengthen its competencies in advanced technologies.

Sincerely,

This statement has been translated into English for informational purposes. In case of a discrepancy between the Turkish and the English versions of this disclosure statement, the Turkish version shall prevail.

We proclaim that our above disclosure is in conformity with the principles set down in "Material Events Communiqué" of Capital Markets Board, and it fully reflects all information coming to our knowledge on the subject matter thereof, and it is in conformity with our books, records and documents, and all reasonable efforts have been shown by our Company in order to obtain all information fully and accurately about the subject matter thereof, and we're personally liable for the disclosures.
