Explanations	

As part of its growth strategy in next-generation mobility and autonomous transportation technologies, Tripy has reached an important milestone in its ongoing work in the field of fully driverless autonomous logistics vehicles (Robovans), and a board of directors' resolution has been adopted regarding investments to be made in this field.

These technologies, which have applications across numerous sectors, particularly e-commerce, retail, cargo, distribution, warehousing, and urban logistics, are expected to play a decisive role in the transformation of the global logistics industry in the coming period.

The size and growth potential of the global market demonstrate the strategic opportunity in this field. The global autonomous last-mile delivery market reached approximately USD 1.6 billion in 2024 and is projected to rise to approximately USD 5.9 billion by 2030.

Our Company continues its efforts to introduce fully driverless Robovan technologies to the Turkish market and develop their commercial applications.

In the very near future, the Company plans to structure its operations in Turkey, implement applications in potential areas of use, and advance partnership discussions with leading industry players, particularly large-scale logistics and cargo companies. As of today, discussions with some of Turkey's most prominent companies have reached the order stage.

With a projected reduction of up to 45% in urban logistics costs, our Company aims to position itself at an early stage of this transformation and play an active role in the development and widespread adoption of next-generation autonomous logistics solutions in Turkey.
