Following renewal audits, our Company's existing CMMI DEV ML3 certification has been renewed.

CMMI (Capability Maturity Model Integration) is an internationally recognized process improvement model that measures the maturity of software and systems development processes. CMMI Development (DEV) is the model area focused on improving product and service development processes, while ML3 indicates that the organization has been assessed at Maturity Level 3. This level signifies that processes are no longer dependent on specific individuals but are instead defined and documented at an organizational level, and are applied consistently across all projects. Furthermore, holding this certification can be a prerequisite for participating in certain tenders for which our Company is eligible to submit bids.

Respectfully announced to the public and our investors.

We proclaim that our above disclosure is in conformity with the principles set down in “Material Events Communiqué” of Capital Markets Board, and it fully reflects all information coming to our knowledge on the subject matter thereof, and it is in conformity with our books, records and documents, and all reasonable efforts have been shown by our Company in order to obtain all information fully and accurately about the subject matter thereof, and we’re personally liable for the disclosures.
